#### DETAILED ACTION

## Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

  The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. Claim 10 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 10 is misdescriptive of the embodiments depicted in Figures 1-2, since it is not clear how an infrared data transmitter [viewed as reference 55] can <u>be both</u> "within the enclosure" and "extending outside the enclosure" as stipulated in independent claim 1.

### Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.
- 4. Claims 1-9, 11-13 & 15-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Engler. Engler (figures 1-2) teaches of a data protection device comprising: an enclosure (4) having at least one wall (16) and a closable opening (opening closed by a door 40), the enclosure capable of protecting at least one data storage device (60) from a fire (view title); at least one

Application/Control Number: 09/640,197

Art Unit: 3636

electrical connector and at least one data transmitter (both represented by 80 - see col. 8, lines 45-46) within the enclosure respectively, for providing power to the inside of the enclosure and a data link between the inside and outside of the enclosure. The data storage device being continuously connected to a power source and a data source via the cables (80). As to claims 11-13 & 15-20, Engler teaches applicant's basic inventive claimed concept as structurally disclosed above, but does not specifically state a "method" of protecting a data storage device. However, the normal use or assembly of Engler's structure would inherently encompass the steps as set forth as readily apparent to the examiner.

# Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 10, 14 & 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Engler in view of Applicant's Prior Art Admission [known hereafter as APAA] as disclosed on page 5, lines 20-23. Engler teaches applicant's basic inventive claimed concept as disclosed above, but does not show the at least one data transmitter as utilizing infrared technology. However, on page 5, lines 20-23, applicant has disclosed that an "infrared communications link, such as one well known in the art" may be substituted for the data cord. It would have been obvious to a

Application/Control Number: 09/640,197

Art Unit: 3636

person of ordinary skill in the art at the time the invention was made to replace a material [physical] link [a cord for example] with an invisible [non-physical] link [a radio wave for example] since it was known in the art [common knowledge] that infrared transmission between a source and remote destination eliminates the conventional hard wiring normally required.

### Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Faber, Canadian patent no. 900,551, Wenning et al., and Cann describe enclosures with means to convey power/signals in and out of the structure. Pihl et al., describes an electronic data security apparatus.

Any inquiry concerning this communication from the examiner should be directed to James O. Hansen whose telephone number is (703) 305-7414. Examiner Hansen can normally be reached Monday to Friday from 9:00 A.M. to 5:00 P.M. Eastern Time Zone.

Any inquiry of a general nature or relating to the status of this application should be directed to the group receptionist whose telephone number is (703) 308-2168. Fax numbers for Official Papers are as follows: (703) 305-3597 & (703) 305-7687. The unit fax phone number for Unofficial Papers is as follows: (703) 308-3691.
